arrow

$dp(i)(j)$ \rightarrow numbers of paths from (i, j) to $(n-1, m-1)$;

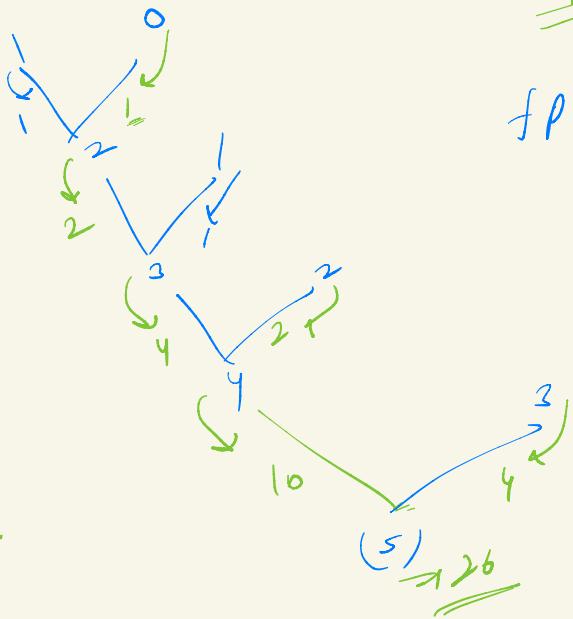

Tricks

- 1) for loop starts from base cases.
- 2) your final answer lies at from where you called your main function

$$\int p(z) = 2$$

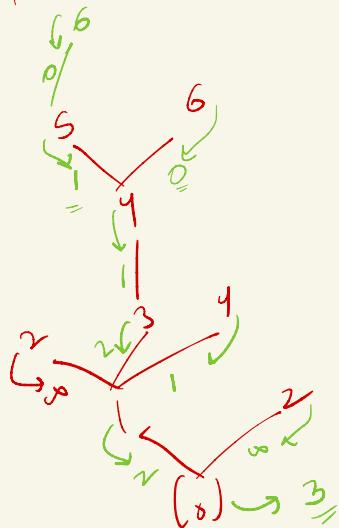

A hand-drawn diagram consisting of a green oval on the left containing the letter 'n'. Two arrows originate from the right side of this oval and point towards the right. The top arrow points to the word 'go alone' written in cursive. The bottom arrow points to the word 'fear' also written in cursive.

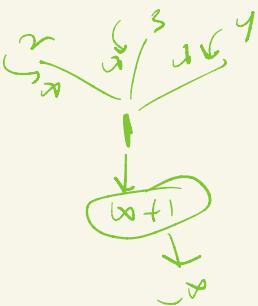

$$f p(n) = f p(n-1) + f p(n-2) \otimes (n-1)$$

$$10 + 4 \neq 4$$

$$\begin{array}{r} \overset{0}{\cancel{1}} \quad \overset{2}{\cancel{0}} \quad \overset{3}{\cancel{0}} \quad \overset{4}{\cancel{0}} \quad \overset{5}{\cancel{4}} \\ \boxed{2 \quad 3 \quad 0 \quad 0 \quad 0 \quad 4} = \end{array}$$
